June 14, 2011 Tech Bunch for Lunch

Join us as Doug Corrigan, Executive Director of the Riverstone Energy Center, will discuss the center and how it will impact Southern Virginia.

Located in South Boston, the Riverstone Energy Center (REC) provides incubation and commercialization support to new technologies and businesses in the sustainable energy sector. The REC is a 7,000 square foot facility that houses the clean energy incubator and commercialization center, and the Modeling and Simulation Center of Excellence. The Modeling and Simulation Center, or the "[CAVE](#)", is a fully-immersive 3D virtual-reality environment that provides unparalleled modeling and simulation capabilities for design reviews, data analysis, and training. Also, the Energy Center has a multimedia center capable of producing sophisticated audio, visual and print materials that help clients tell their story to the government and industry. Additionally, the newly created Center for Coatings Application Research and Education, or C-CARE, is a world-class research, development, and training environment that will benefit many industries in our area by providing work-force training and development work for improving their internal coating and finishing operations.
